

Outline

- Review of simple data structures
- Intro to algorithm design

10/09/00

CS140(9)

1

Fun with data structures

- Linked lists and arrays
- Stacks and queues
- Graphs
- Rooted trees

10/09/00

CS140(9)

2

Stack

- Create(S)
- Push(x,S)
- $x = \text{Pop}(S)$

10/09/00

CS140(9)

3

Stack

10/09/00

CS140(9)

4

Stack

- Implement with linked lists or arrays to get $O(1)$ per operation:
- Create(S) (create an empty stack)
 - Push(x,S)
 - $x = \text{Pop}(S)$

10/09/00

CS140(9)

5

Queue

- Create(Q)
- Enqueue(x,Q)
- $x = \text{Dequeue}(Q)$

10/09/00

CS140(9)

6

Queue

10/09/00

CS140(9)

7

Queue

Implement with linked list or (circular) array to get $O(1)$ time per operation

Create(Q)
Enqueue(x,Q)
x=Dequeue(Q)

10/09/00

CS140(9)

8

Graphs

- Is (u,v) an edge of G ?
- What are the neighbors of v in G ?
- Add vertex/edge
- Remove vertex/edge

10/09/00

CS140(9)

9

Graph – adjacency list

$v_1 : v_2$

$v_2 : v_1 \rightarrow v_3 \rightarrow v_4$

$v_3 : v_2 \rightarrow v_4$

$v_4 : v_2 \rightarrow v_3$

10/09/00

CS140(9)

10

Graph – adjacency matrix

0	1	0	0
1	0	1	1
0	1	0	1
0	1	1	0

10/09/00

CS140(9)

11

Rooted Trees

- Who is the parent of v ?
- Who are the children of v ?
- Who is the predecessor of v ?
- Who is the successor of v ?

10/09/00

CS140(9)

12

Rooted Trees

10/09/00

CS140(9)

13

Algorithm Design Techniques

- **Induction**
- Divide and Conquer
- Dynamic Programming
- Greedy
- Reduction

10/09/00

CS140(9)

14

Induced Subgraphs

- Let $G=(V,E)$ be a graph and let W be a subset of V .
- The subgraph of G induced by W is the graph with
Vertex set: W
Edge set: $\{(x,y) \in E \text{ such that } x \text{ and } y \text{ are in } W\}$

10/09/00

CS140(9)

15

Example

10/09/00

CS140(9)

16

Maximal Induced Subgraph

- Input: A graph $G=(V,E)$ and an integer k .
- Output: A largest subgraph $G'=(V',E')$ of G such that every vertex of G' has degree at least k .

10/09/00

CS140(9)

17

Maximal Induced Subgraph Example

- Input:

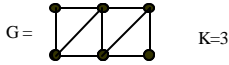

$G =$ $K=2$
- Output:

10/09/00

CS140(9)

18

Maximal Induced Subgraph Example

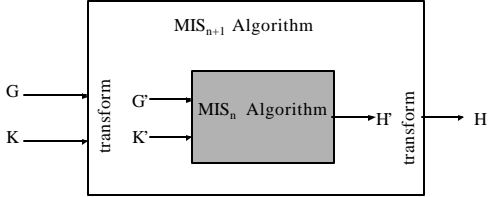

- Input:  $G =$ $K=3$
- Output: ϕ

10/09/00 CS140(9) 19

MIS_n Algorithm

Finds MIS on graphs with n or fewer node

MIS_{n+1} Algorithm

10/09/00 CS140(9) 20

MIS(G,k)

- If every vertex has degree at least k
 - Return G
- Else
 - Let x be a vertex with degree less than k
 - Let G' be the subgraph of G induced by V - {x}
 - Return MIS_n(G',k)

10/09/00 CS140(9) 21

Correctness

Let H be a maximal induced subgraph of G with degree at least k.

- Case 1: Every vertex of G has degree at least k:
- Case 2: A vertex x of G has degree less than k:

10/09/00 CS140(9) 22

Running Time

(Assume G has n vertices and m edges)

- Adjacency Matrix: $T(n)=T(n-1)+cn^2$
- Adjacency List: $T(n,m) = T(n-1,m-1) + m$
- Other:

10/09/00 CS140(9) 23

Polynomial Evaluation

- Input: Integers a_n, a_{n-1}, \dots, a_0 and an integer x.
- Output: $P_n(x) = \sum_{i=0}^n a_i x^i$

10/09/00 CS140(9) 24

Polynomial Evaluation Example

- Input: 3,-1,0,2 and 2
- Output: 22
- Explanation: $P(x)=3x^3-x^2+2$; $P(2)=22$

10/09/00

CS140(9)

25

Naïve Approach

- Number of multiplications:

$$\sum_{i=0, \dots, n} i = n(n+1)/2$$

- Number of additions: n

10/09/00

CS140(9)

26

PE_n Algorithm

Evaluation of polynomials of degree at most n

10/09/00

CS140(9)

27

$PE(a_n, \dots, a_0, x)$

- If $n=0$ then return a_0
- Else return $a_0 + x \cdot PE(a_n, \dots, a_1, x)$

10/09/00

CS140(9)

28

Inductive Approach

- Number of multiplications:
 $M(n) = 1 + M(n-1)$, $M(0) = 0$
Closed form: $M(n)=n$
- Number of additions:
 $M(n) = 1 + M(n-1)$, $M(0) = 0$
Closed form: $M(n)=n$

10/09/00

CS140(9)

29

Vertex Cover

- Let $G=(V,E)$ be a graph
- A vertex cover of G is a subset $W \subseteq V$ such that for every edge $e=(x,y)$ of G either x is in W or y is in W

10/09/00

CS140(9)

30

Vertex Cover Example

Some vertex covers:
 $\{v_1, v_2, v_3, v_4\}$,
 $\{v_2, v_3\}$

10/09/00

CS140(9)

31

Vertex Cover in Forests

- Input: Forest $F=(V,E)$
- Output: A smallest vertex cover of F

10/09/00

CS140(9)

32

A few observations and definitions

- A collection of trees is a forest
- A tree on n nodes has $n-1$ edges
- A tree never has a cycle
- A tree is always connected
- A tree need not be rooted
- A node with 0 or 1 edges in a tree is a leaf
- A (non-empty) tree always has a leaf

10/09/00

CS140(9)

33

VCF_n Algorithm

Vertex Cover in forests with at most n nodes

10/09/00

CS140(9)

34

Simple Case

- If F has no edges then return _____

10/09/00

CS140(9)

35

Suppose F has an edge:
 Find something to keep
 or throw away ...

10/09/00

CS140(9)

36

Claim

- If u is a leaf of F and v is adjacent to u then some smallest vertex cover of F includes v .
- Proof:
 - Let W be a smallest vertex cover of F .
 - If v is not in W then u must be.
 - But then $W - \{u\} + \{v\}$ is also a smallest vertex cover of F .

10/09/00

CS140(9)

37

Vertex Cover in Forests

If F has no edges return \emptyset

Else {

 Let u be a leaf with an edge in F

 Let v be the node adjacent to u in F

 Let F' be the subgraph of F induced by $V - \{u, v\}$

 Return $\{v\} \cup \text{VCT}(F')$

}
