Confidence Interval of Sample Mean

- Knowing where 90% of sample means fall, we can state a 90% confidence interval
- Key is *Central Limit Theorem*:
 - Sample means are normally distributed
 - Only if samples independent
 - Mean of sample means is population mean μ
 - Standard deviation (*standard error*) is σ/\sqrt{n}

Estimating Confidence Intervals

- ▶ Two formulas for confidence intervals
 - ▶ Over 30 samples from any distribution: z -distribution
 - ▶ Small sample from normally distributed population: t -distribution
- ▶ Common error: using t -distribution for non-normal population
 - ▶ Central Limit Theorem often saves us

Estimating Confidence Intervals

- Two formulas for confidence intervals
 - Over 30 samples from any distribution: z -distribution
 - Small sample from normally distributed population: t -distribution
- Common error: using t -distribution for non-normal population
 - Central Limit Theorem often saves us

The z Distribution

- ▶ Interval on either side of mean:

$$\bar{x} \mp z_{1-\frac{\alpha}{2}} \left(\frac{s}{\sqrt{n}} \right)$$

- ▶ Significance level α is small for large confidence levels
- ▶ Tables of z are tricky: be careful!

- How tall is Fred?
 - 90% sure he's between 155 and 190 cm
 - We want to be 99% sure we're right
 - So we need more room: 99% sure he's between 145 and 200 cm

Making Decisions

- ▶ Why do we use confidence intervals?
 - ▶ Summarizes error in sample mean
 - ▶ Gives way to decide if measurement is meaningful
 - ▶ Allows comparisons in face of error
- ▶ But remember: at 90% confidence, 10% of sample C.I.s do not include population mean
 - ▶ In other words, 10% of experiments give wrong answer!

2015-06-15

CS147

└ Comparing Alternatives

 - Also consistent with 160 and 180!

Comparing Alternatives

- ▶ Often need to find better system
 - ▶ Choose fastest computer to buy
 - ▶ Prove our algorithm runs faster
- ▶ Different methods for paired/unpaired observations
 - ▶ *Paired* if i^{th} test on each system was same
 - ▶ *Unpaired* otherwise

2015-06-15

CS147

└ Comparing Alternatives

└ Comparing Alternatives

Comparing Alternatives

- Often need to find better system
 - Choose fastest computer to buy
 - Prove our algorithm runs faster
- Different methods for paired/unpaired observations
 - *Paired* if i^{th} test on each system was same
 - *Unpaired* otherwise

Comparing Paired Observations

- ▶ For each test calculate performance difference
- ▶ Calculate confidence interval for differences
- ▶ If interval includes zero, systems aren't different
 - ▶ If not, sign indicates which is better

2015-06-15 CS147
└ Comparing Alternatives
└ Paired Observations
└ Comparing Paired Observations

Comparing Paired Observations

- For each test calculate performance difference
- Calculate confidence interval for differences
- If interval includes zero, systems aren't different
 - If not, sign indicates which is better

Example: Comparing Paired Observations

- ▶ Do home baseball teams outscore visitors?

- ▶ Sample from 9-4-96:

H	4	5	0	11	6	6	3	12	9	5	6	3	1	6
V	2	7	7	6	0	7	10	6	2	2	4	2	2	0
H-V	2	-2	-7	5	6	-1	-7	6	7	3	2	1	-1	6

- ▶ Mean 1.4, 90% interval (-0.75, 3.6)
 - ▶ Can't tell from this data
 - ▶ 70% interval is (0.10, 2.76)
 - ▶ But tuning the interval to the data is guaranteed to produce wrong answers ("data snooping")

2015-06-15

CS147

└ Comparing Alternatives

└ Paired Observations

└ Example: Comparing Paired Observations

Example: Comparing Paired Observations

- Do home baseball teams outscore visitors?

V	2	7	7	6	0	7	10	6	2	2	4	2	2	0
H-V	2	-2	-7	5	6	-1	-7	6	7	3	2	1	-1	6
- Mean 1.4, 90% interval (-0.75, 3.6)
 - Can't tell from this data
 - 70% interval is (0.10, 2.76)
 - But tuning the interval to the data is guaranteed to produce wrong answers ("data snooping")

Comparing Unpaired Observations

2015-06-15

CS147

└ Comparing Alternatives

└ Unpaired Observations

└ Comparing Unpaired Observations

Comparing Unpaired Observations

- Start with confidence intervals
- If no overlap:
 - Systems are different and higher mean is better (for HB metrics)
 - If overlap and at least one CI contains other's mean:
 - Systems are not different at this level
 - If overlap and neither mean is in other CI
 - Must do t -test

Start with confidence intervals

- ▶ If no overlap:
 - ▶ Systems are different and higher mean is better (for HB metrics)
- ▶ If overlap and at least one CI contains other's mean:
 - ▶ Systems are not different at this level
- ▶ If overlap and neither mean is in other CI
 - ▶ Must do t -test

The t -Test (1)

1. Compute sample means \bar{x}_a and \bar{x}_b
2. Compute sample standard deviations s_a and s_b
3. Compute mean difference = $\bar{x}_a - \bar{x}_b$
4. Compute standard deviation of difference:

$$s = \sqrt{\frac{s_a^2}{n_a} + \frac{s_b^2}{n_b}}$$

2015-06-15

CS147

└ Comparing Alternatives

└ Unpaired Observations

└ The t -Test (1)The t -Test (1)

1. Compute sample means \bar{x}_a and \bar{x}_b
2. Compute sample standard deviations s_a and s_b
3. Compute mean difference = $\bar{x}_a - \bar{x}_b$
4. Compute standard deviation of difference:

$$s = \sqrt{\frac{s_a^2}{n_a} + \frac{s_b^2}{n_b}}$$

The t -Test (2)

1. Compute effective degrees of freedom:

$$\nu = \frac{(s_a^2/n_a + s_b^2/n_b)^2}{\frac{1}{n_a+1} \left(\frac{s_a^2}{n_a}\right) + \frac{1}{n_b+1} \left(\frac{s_b^2}{n_b}\right)} - 2$$

2. Compute the confidence interval:

$$(\bar{X}_a - \bar{X}_b) \mp t_{[1-\alpha/2; \nu]} S$$

3. If interval includes zero, no difference

2015-06-15

CS147

- └ Comparing Alternatives
 - └ Unpaired Observations
 - └ The t -Test (2)

The t -Test (2)

1. Compute effective degrees of freedom:

$$\nu = \frac{(s_a^2/n_a + s_b^2/n_b)^2}{\frac{1}{n_a+1} \left(\frac{s_a^2}{n_a}\right) + \frac{1}{n_b+1} \left(\frac{s_b^2}{n_b}\right)} - 2$$
2. Compute the confidence interval:

$$(\bar{X}_a - \bar{X}_b) \mp t_{[1-\alpha/2; \nu]} S$$
3. If interval includes zero, no difference

Comparing Proportions

- ▶ If k of n trials give a certain result, then confidence interval is:

$$\frac{k}{n} \mp z_{1-\alpha/2} \frac{\sqrt{k - k^2/n}}{n}$$

- ▶ If interval includes 0.5, can't say which outcome is statistically meaningful
- ▶ Must have $k \geq 10$ to get valid results

2015-06-15

CS147

└ Comparing Alternatives

└ Proportions

└ Comparing Proportions

Comparing Proportions

$$\frac{k}{n} \mp z_{1-\alpha/2} \frac{\sqrt{k - k^2/n}}{n}$$

- If interval includes 0.5, can't say which outcome is statistically meaningful
- Must have $k \geq 10$ to get valid results

Selecting a Confidence Level

- ▶ Depends on cost of being wrong
- ▶ 90%, 95% are common values for scientific papers
- ▶ Generally, use highest value that lets you make a firm statement
 - ▶ But you must choose before you analyze data
 - ▶ And it's better to be consistent throughout a given paper

2015-06-15

CS147

└ Comparing Alternatives

└ Special Considerations

└ Selecting a Confidence Level

- Here, z represents either z or t as appropriate

- For a proportion $p = k/n$:

$$n = z^2 \frac{p(1-p)}{r^2}$$

Choosing a Sample Size for Comparisons

- ▶ Want to demonstrate system A is better than B (or vice versa)
- ▶ Must use same number of samples n for both systems
- ▶ Then we need:

$$\hat{n} \geq \left(\frac{z_{1-\alpha/2}(s_A + s_B)}{\bar{x}_B - \bar{x}_A} \right)^2$$

- ▶ For proportions, use p_A for \bar{x}_A , and $\sqrt{p_A(1-p_A)}$ for s_A , etc.

2015-06-15

CS147

└ Comparing Alternatives

└ Sample Sizes

└ Choosing a Sample Size for Comparisons

Choosing a Sample Size for Comparisons

- Want to demonstrate system A is better than B (or vice versa)
- Must use same number of samples n for both systems
- Then we need:

$$n \geq \left(\frac{z_{1-\alpha/2}(s_A + s_B)}{\bar{x}_B - \bar{x}_A} \right)^2$$

- For proportions, use p_A for \bar{x}_A , and $\sqrt{p_A(1-p_A)}$ for s_A , etc.

Example of Choosing Sample Size

- ▶ Five runs of a compilation took 22.5, 19.8, 21.1, 26.7, 20.2 seconds
- ▶ How many runs to get $\pm 5\%$ confidence interval at 90% confidence level?
- ▶ $\bar{x} = 22.1$, $s = 2.8$, $t_{0.95;4} = 2.132$
- ▶ $n = \left(\frac{(100)(2.132)(2.8)}{(5)(22.1)} \right)^2 = 5.4^2 = 29.2$
- ▶ Note that first 5 runs can't be reused!

2015-06-15
