

CS140: Algorithms

Z Sweedyk
Lecture 9

10/17/01

CS140 Lec 9

1

Outline

- Reductions to network flow
- Reductions between search and decision problems

10/17/01

CS140 Lec 9

2

Reductions to Network Flow Problem

- **Bipartite Matching μ Network Flow**
- The Gee-ball Problem \propto Network Flow

10/17/01

CS140 Lec 9

3

Matching

- Let $G=(V,E)$ be a graph.
- $E' \subseteq E$ is a matching if every vertex of V is incident to at most one edge of E' .

10/17/01

CS140 Lec 9

4

Matching Example

10/17/01

CS140 Lec 9

5

Bipartite Graph

- Let $G=(V,E)$ be a graph.
- G is bipartite if V can be partitioned into V_1 and V_2 such that no pair of vertices in V_i ($i=1,2$) have an edge.

10/17/01

CS140 Lec 9

6

Bipartite Example

10/17/01

CS140 Lec 9

7

Bipartite Matching

- Input: Bipartite graph G
- Output: A largest matching of G

10/17/01

CS140 Lec 9

8

Bipartite Matching \propto Network Flow

10/17/01

CS140 Lec 9

9

Bipartite Matching \propto Network Flow

- Transform Input - Step 1

10/17/01

CS140 Lec 9

10

Bipartite Matching \propto Network Flow

- Transform Input - Step 2

10/17/01

CS140 Lec 9

11

Bipartite Matching \propto Network Flow

10/17/01

CS140 Lec 9

12

Bipartite Matching \propto Network Flow

- Transform output

10/17/01

CS140 Lec 9

13

Reduction

- Is it correct?
- Is it efficient?

10/17/01

CS140 Lec 9

14

Integrality theorem

- If the capacities in a network are integral, then the max flow can be achieved with integral flows on each edge.
- Further the Ford-Fulkerson method yields an integral solution.

10/17/01

CS140 Lec 9

15

Proof of correctness

There is a 1-1 correspondence between 0/1 flows in the network and matchings in the input graph.

10/17/01

CS140 Lec 9

16

Reduction

- Is it correct?
- **Is it efficient?**

$$T_{BM}(n) = cn + T_{FF}(n+2)$$

10/17/01

CS140 Lec 9

17

Reductions to Network Flow Problem

- Bipartite Matching \propto Network Flow
- **The Gee-ball Problem μ Network Flow**

10/17/01

CS140 Lec 9

18

The Gee-ball Problem

- The southwestern conference of the gee-ball league consists of $n+1$ teams. Team $n+1$ is from HMC.
- We want to know whether it is possible for HMC to win more games this season than any other team in the conference.
- No ties allowed.

10/17/01

CS140 Lec 9

19

Example

- The teams are Pitzer, CMC, Pomona, and HMC
- Games won so far:
 - Pitzer 4, CMC 3, Pomona 2, HMC 2
- Games to play:
 - 1 game: Pitzer vs. HMC
 - 2 games: Pomona vs. HMC

10/17/01

CS140 Lec 9

20

The Gee-ball Problem

- Teams $t_1, t_2, \dots, t_n, t_{n+1}$
- So far this year team i has won w_i games.
- Teams i and j will play each other g_{ij} more times this season ($g_{ij}=g_{ji}$).

10/17/01

CS140 Lec 9

21

Gee-ball \propto Network Flow

10/17/01

CS140 Lec 9

22

Transform Input

10/17/01

CS140 Lec 9

23

Transform Input

10/17/01

CS140 Lec 9

24

Transform Input

10/17/01

CS140 Lec 9

25

Transform Input

Let $W = w_{n+1} + \sum_{i=1 \dots n} g_{n+1,i}$

10/17/01

CS140 Lec 9

26

Gee-ball \propto Network Flow

10/17/01

CS140 Lec 9

27

Transform Output

There is a way for HMC to win the season if and only if _____.

10/17/01

CS140 Lec 9

28

Decision Problems

Decision problems are computational problems for which the output is "yes" or "no"

10/17/01

CS140 Lec 9

29

Search: Vertex Cover

- Input: Graph G
- Output: A smallest subset of vertices W such that every edge of G is incident to some vertex in W .

10/17/01

CS140 Lec 9

30

Decision: Vertex Cover

- Input: Graph G and integer K
- Question: Is there a subset W of K or fewer vertices of G such that every edge is incident to some vertex in W ?

10/17/01

CS140 Lec 9

31

Polynomial Time Reductions

- Decision-VC \leq_p Search-VC
- Search-VC \leq_p Decision-VC

10/17/01

CS140 Lec 9

32

Independent Set

- Input: Graph G and integer K
- Question: Is there a subset W of K or more vertices of G such that no two vertices of W are adjacent?
- Does Search-IS \leq_p Decision-IS?

10/17/01

CS140 Lec 9

33

3-Colorability

- Input: Graph G
- Question: Can the vertices of G be colored with Red, Green, and Blue so that no adjacent vertices have the same color?
- Does Search-3Col \leq_p Decision-3Col?

10/17/01

CS140 Lec 9

34
