

CS140: Algorithms

Z Sweedyk
Lecture 14

11/5/01

CS140 Lec 14

1

Graph Algorithms

- **Strongly connected components**
- Topological sort
- Single-source shortest path

11/5/01

CS140 Lec 14

2

Digraph notions

- Vertex y is *reachable* from x if there is a directed path in G from x to y .
(By convention x is reachable from x by a directed path of length 0.)
- Vertices x and y are *strongly connected* if x is reachable from y and y is reachable from x .

11/5/01

CS140 Lec 14

3

Strongly-connected vertices?

11/5/01

CS140 Lec 14

4

Strongly-connected vertices:

11/5/01

CS140 Lec 14

5

Digraph notions

- Vertex y is *reachable* from x if there is a directed path in G from x to y .
(By convention x is reachable from x by a directed path of length 0.)
- Vertices x and y are *strongly connected* if x is reachable from y and y is reachable from x .
- Vertices form *strongly connected components*.
(Equivalence classes)

11/5/01

CS140 Lec 14

6

DFS Application

- Identify the strongly connected components of a digraph G .

11/5/01

CS140 Lec 14

7

Depth-First(x)

Depth-First(x)

Mark x visited

For each edge $\langle x, y \rangle$

If y is unvisited then
DFS(y)

11/5/01

CS140 Lec 14

8

DFS(G)

DFS(G)

While G has an unvisited
vertex x :

Depth-First(x)

11/5/01

CS140 Lec 14

9

Selection rule

- We'll use alphabetical priority

11/5/01

CS140 Lec 14

10

DFS(G)

DFS(G)

While G has an unvisited
vertex x :

Depth-First(x)

Choose
alphabetically

11/5/01

CS140 Lec 14

11

Depth-First(x)

Depth-First(x)

Mark x visited

For each edge $\langle x, y \rangle$

If y is unvisited then
DFS(y)

Choose
alphabetically

11/5/01

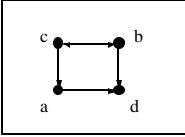

CS140 Lec 14

12

DFS(G)

Alphabetical priority

a is unvisited so DFS(a)

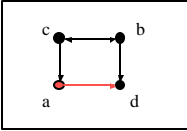

Call Stack:
DFS(G)

11/5/01
CS140 Lec 14
13

DFS(a)

Alphabetical priority

Visit a
Find <a,d> edge and call DFS(d)

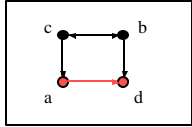

Call Stack:
DFS(a)
DFS(G)

11/5/01
CS140 Lec 14
14

DFS(d)

Alphabetical priority

Visit d
All out-edges checked so return

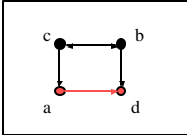

Call Stack:
DFS(d)
DFS(a)
DFS(G)

11/5/01
CS140 Lec 14
15

DFS(a)

Alphabetical priority

Visit a
Find <a,d> edge and call DFS(d)
All out-edges checked so return

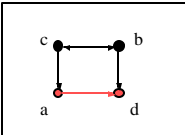

Call Stack:
DFS(a)
DFS(G)

11/5/01
CS140 Lec 14
16

DFS(G)

Alphabetical priority

a is unvisited so DFS(a)
b is unvisited so DFS(b)

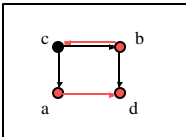

Call Stack:
DFS(G)

11/5/01
CS140 Lec 14
17

DFS(b)

Alphabetical priority

Visit b
Find edge <b,c> and call DFS(c)

Call Stack:
DFS(b)
DFS(G)

11/5/01
CS140 Lec 14
18

DFS(c) Alphabetical priority

Visit c
Find edge $\langle c, a \rangle$ – no action
Find edge $\langle c, b \rangle$ – no action
All out-edges checked so return

Call Stack:
DFS(c)
DFS(b)
DFS(G)

11/5/01

CS140 Lec 14

19

DFS(b) Alphabetical priority

Visit b
Find edge $\langle b, c \rangle$ and call DFS(c)
Find edge $\langle b, d \rangle$ – no action
All out-edges checked so return

Call Stack:
DFS(b)
DFS(G)

11/5/01

CS140 Lec 14

20

DFS(G) Alphabetical priority

a is unvisited so DFS(a)
b is unvisited so DFS(b)
All nodes checked so return

Call Stack:
DFS(G)

11/5/01

CS140 Lec 14

21

What is the running time of DFS?

- $O(m+n)$
- Every vertex is pushed onto the stack once and popped from the stack once.
- Each out-edge is inspected once.

11/5/01

CS140 Lec 14

22

Strongly Connected Components

- Input: Digraph G
- Output: The strongly connected components of G.

11/5/01

CS140 Lec 14

23

Naïve Algorithm

- Are x and y in the same connected component?
- Mark all vertices unvisited and call DFS(x)
- If y unvisited return no
- Mark all vertices unvisited and call DFS(y)
- If x unvisited return no
- Return yes

11/5/01

CS140 Lec 14

24

Naïve algorithm

- Worst case: n^2 calls to DFS(x)

11/5/01

CS140 Lec 14

25

All little more sophistication please...

- We can find the strongly connected components of G with two calls to DFS(G)

11/5/01

CS140 Lec 14

26

Three ideas

- DFS Forest
- Timestamps
- Reversal of G

11/5/01

CS140 Lec 14

27

DFS Forest

- The DFS Forest of G is the subgraph consisting of
 - Every vertex of G
 - Each edge traversed in DFS(G)
- Different selection rules give different results

11/5/01

CS140 Lec 14

28

DFS Forest

- Selection rule: a,b,c,d

- What about b,d,a,c?
- What about d,c,b,a?
- What about b,c,d,a?

11/5/01

CS140 Lec 14

29

WARNING

- DFS Forests are sometimes

11/5/01

CS140 Lec 14

30

What is the connection?

- What can we say about strongly connected components of G vs. trees in a DFS forest of G ?

11/5/01

CS140 Lec 14

31

What can we say?

- What is the relationship between the trees of a DFS forest and the strongly connected components of the graph?

11/5/01

CS140 Lec 14

32

What can we say?

- If x and y are in the same strongly connected component of G then _____.
- If x and y are in different strongly connected components of G then _____.

11/5/01

CS140 Lec 14

33

What can we say?

- If x and y are in the same tree in a DFS forest of G then _____.
- If x and y are in different trees in a DFS forest of G then _____.

11/5/01

CS140 Lec 14

34

DFS Forest

- Strongly-connected in G is a refinement of the relation “in the same tree of a DFS forest of G ”

11/5/01

CS140 Lec 14

35

Three ideas

- DFS Forest of G
- Timestamps**
- Reversal

11/5/01

CS140 Lec 14

36

DFS(G) Alphabetical order

Record first-arrival and last-departure times.

	First-arrival	Last-Departure
a		
b		
c		
d		

11/5/01

CS140 Lec 14

37

DFS(G) Alphabetical order

	First-arrival	Last-Departure
a	1	4
b	5	8
c	6	7
d	2	3

11/5/01

CS140 Lec 14

38

Three ideas

- DFS Forest
- Timestamps
- **Reversal of G**

11/5/01

CS140 Lec 14

39

G^R : Reverse the edges of G

11/5/01

CS140 Lec 14

40

$(G^R)^R$: Reverse the edges of G^R

11/5/01

CS140 Lec 14

41

Reachability

X is reachable from Y in $G \Leftrightarrow Y$ is reachable from X in G^T

11/5/01

CS140 Lec 14

42

Reachability

X is reachable from Y in $G \Leftrightarrow Y$ is reachable from X in G^T
So the Strongly Connected Components of G and G^R are the same!

11/5/01

CS140 Lec 14

43

SCC

Reversal only affects edges between different strongly connected components

11/5/01

CS140 Lec 14

44

SCC

- DFS(G) with timestamp (alphabetical or other order)
- DFS(G^R) using last-departure time decreasing order
- The trees in the DFS forest of G^R correspond to the connected components of G

11/5/01

CS140 Lec 14

45

DFS(G)

	First-arrival	Last-Departure
a	1	4
b	5	8
c	6	7
d	2	3

11/5/01

CS140 Lec 14

46

DFS(G^R)

Order: b,c,a,d

11/5/01

CS140 Lec 14

47

DFS Forest

Order: b,c,a,d

11/5/01

CS140 Lec 14

48

Why does this work?

1. If x and y are in the same strongly connected component of G then they are in the same tree of the DFS forest of G^R .
2. If x and y are in the same tree of the DFS forest of G^R then they are in the same strongly connected component of G .

11/5/01

CS140 Lec 14

49

Claim 1 (Easy)

1. If x and y are in the same strongly connected component of G then they are in the same tree of the DFS forest of G^R .
 - If x and y are in the same SCC of G then x and y are in the same SCC of G^R .
 - If x and y are in the same SCC of G^R then they are in the same tree of the DFS forest of G^R .

11/5/01

CS140 Lec 14

50

Claim 2

2. If x and y are in the same tree of the DFS forest of G^R then they are in the same strongly connected component of G .

WLOG assume that r is the root the tree containing x and y in the DFS forest of G^R .
Hence r is reachable from x and from y in G .
We will show that x are reachable from r in G .
(The same argument holds for y).

11/5/01

CS140 Lec 14

51

Proof of Claim 2

- We know that $\text{Last-departure}(x) < \text{Last-departure}(r)$.
- If $\text{Last-departure}(x) < \text{First-arrival}(r)$ then r is not reachable from x in $G \Rightarrow \Leftarrow$
- So $\text{First-arrival}(r) < \text{First-arrival}(x) < \text{Last-departure}(x) < \text{Last-departure}(r)$ and therefore x is reachable from r in G .

11/5/01

CS140 Lec 14

52
