

ray tracing

- simple ray casting
- **recursive ray tracing**
- modeling transforms
- cheap tricks
- optimizations

10/5/2003

global effects

- shadows
- thick surface transmission (refraction)
- reflections

10/5/2003

recursive rays

10/5/2003

occlusion (shadows)

light L is occluded if the ray $R'=(P,-ld)$ intersects some object in the scene

10/5/2003

occlusion: implementation

offset R' slightly so it doesn't intersect at P

L is occluded if the ray $(P,-ld)$ intersects some object in the scene

10/5/2003

note: thick surfaces

10/5/2003

ray tracing

- cast ray through pixel into scene
- find closest intersection (if any)
- compute luminance at intersection
 - direct illumination
 - **reflections**
 - **thick surface transmission**

10/5/2003

reflections

- cast ray reflected at P into scene
- find closest intersection point P' (if any)
- compute luminance at P'
- scale by $msr[g,b]$ and add to luminance at P

10/5/2003

transmission

- cast ray transmitted at P into scene
- find closest intersection point P' (if any)
- compute luminance at P'
- scale by $k_{trans} * mdr[g,b]$ and add to luminance at P

10/5/2003

refraction - snell's law

10/5/2003

thin surface refraction

10/5/2003

thick surface refraction

θ_{out} satisfies: $\eta_{out} \sin \theta_{out} = \eta_{in} \sin \theta_{in}$
 $\mathbf{v}_{out} = [\beta \cos \theta_{in} - (1 - \beta^2 \sin^2 \theta_{in})^{\frac{1}{2}}] \mathbf{n} + \beta \mathbf{v}_{in}$ where $\beta = \eta_{in} / \eta_{out}$

10/5/2003

thick surface recursion

10/5/2003

stopping conditions

recurse until:

- a) maximum recursive depth specified by user is reached
 - b) contribution to luminance is less than user specified bound
- cast new ray from P into scene
 - find closest intersection point P' (if any)
 - compute luminance at P'
 - scale and add to luminance at P

10/5/2003

implementation issues

offset new ray slightly to make sure you don't find P again!!!

- cast new ray from P into scene
- find **closest** intersection point P' (if any)
- compute luminance at P'
- scale and add to luminance at P

10/5/2003

stopping conditions

recurse until:

- a) maximum recursive depth specified by user is reached
 - b) contribution to luminance is less than user specified bound
- cast new ray from P into scene
 - find closest intersection point P' (if any)
 - compute luminance at P'
 - scale by $msr/g/b$ or $ktrans$ and add to luminance at P
