This assignment is due at 2:45 PM, Tuesday, Sept. 18.

1) With your partner from the last assignment (UI design), write a brief report summarizing the results of your usability test. Following are some of the questions you should address. What did you learn that conformed to your expectations? What did you learn that was surprising? What did testers find to be the strengths and weaknesses of your interface design and beta functionality? How do you plan to address shortcomings?

2) Complete tutorial 4 on views and interaction. (You may do this with a partner or alone.)

3) Develop the prototype discussed in class. The lecture notes should provide a complete specification of requirements but feel free to email me with any questions. (This should be completed with a partner.)
