This assignment is due at 2:45 PM, Tuesday, Sept. 25.

1) Read the 10 commandments of egoless programming: http://www.codinghorror.com/blog/2006/05/the-ten-commandments-of-egoless-programming.html.

2) Define your coding standards for:
   - Naming
   - Code structure
   - Documentation
   (This should be brief.)

3) Build your alpha! The use cases were given in lecture last time. On Tuesday you’ll turn your code over to someone else to complete – so your submission should just do the basic requirements and no more.

4) You will give a code walk through to the team taking over your code on Tuesday. Prepare for the walk through with a few powerpoint slides to describe your:
   - Code standards
   - Conceptual view of the alpha (i.e. UML)
