

# ROS after CS1?

6 robots, 6 quadcopters,  
60 students, and ROS

Zach Dodds, Harvey Mudd College

02/29/2012

# An experiment *underway*...

1-unit lab  
(one is required)

5 sections of 12  
4 with CS1 or CS2  
1 of seniors

6 Creates + 6 Kinects +  
6 netbooks + 6 drones  
≈ \$6k

**Goal:** to increase students'  
computational sophistication

***not*** to teach  
ROS or robotics

N/A?

all situations are different...

# The labs

weekly, 2-3 hrs.; 1 hr. for write-up; *no other work*

Week	Lab challenge	New hardware	CS Topics Emphasized
1	Line-following	creates	command-line & Python
2	Color segmentation	Kinects: RGB	event-handling
3	Finite-state control	-	finite-state machines
4	Visual servoing	-	understanding vs. implementing
5	Wall-angle estimation	Kinects: Depth	
6	Robot minion!	-	proportional control
7	Wall-following	-	larger-scale integration
9	Gestural control	quadcopters	GUI/visualization
10	Autonomous flight	-	defensive programming
11-14	(Open-ended projects)	all/any	<i>self-defined</i> problems

# The labs

weekly, 2-3 hrs.; 1 hr. for write-up; *no other work*

Week	Lab challenge	New hardware	CS Topics Emphasized
1	Line-following	creates	computer vision & Python
2	Color segmentation	Kinects: RGB	image processing
3	Finite-state control		finite state machines
4	Visual servoing		image processing vs. control
5	Wall following		image processing
6			proportional control
7	Wall following	-	larger-scale integration
9	Gestural control	quadcopters	GUI/visualization
10	Autonomous flight	-	defensive programming
11-14	(Open-ended projects)	all/any	<i>self-defined</i> problems

Singly, in groups, or as a full course – we hope the modules might be of use.

# Western State College

from visiting last summer...

# Western State College

... to outreach this winter

# Western State College

... to outreach this winter

# Week 1

Line following

Create

command-line and Python

thanks: Matt Boutell

# Week 1

Line following

Create

command-line and Python

made it! (the video is 4x)

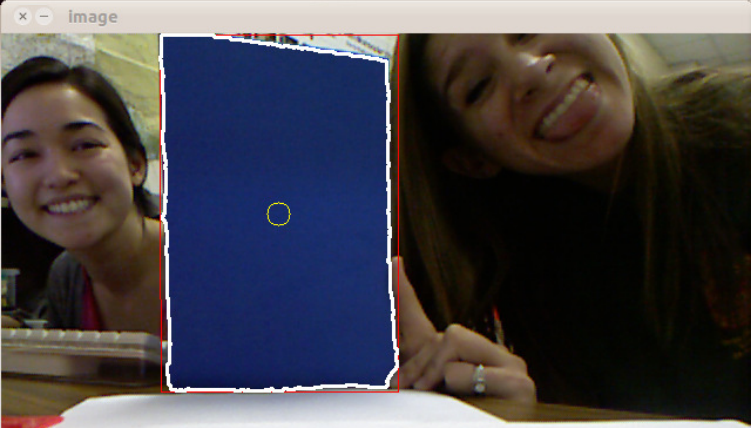

# Week 2

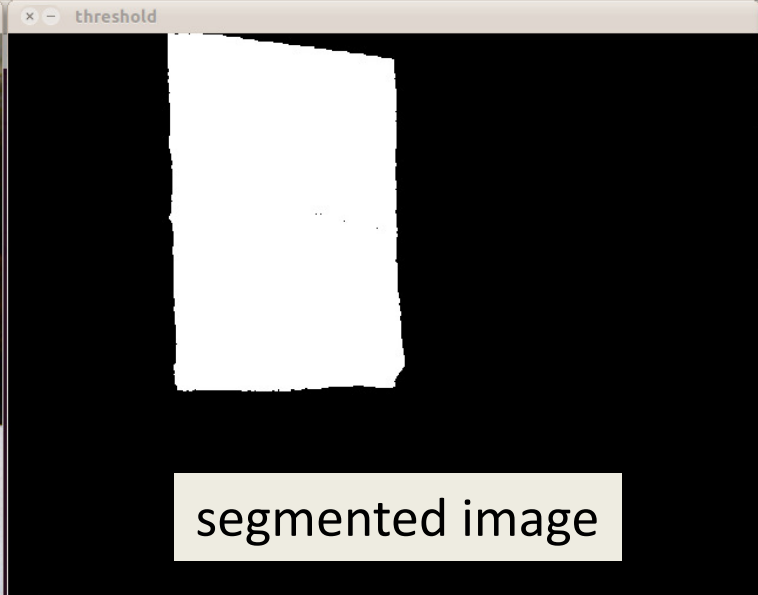

Color segmentation

Kinect: RGB

keyboard/mouse events

original image with overlay

segmented image

### RGB and HSV

low_red	0
high_red	47
low_green	0
high_green	54
low_blue	37
high_blue	122
low_hue	0
high_hue	214
low_sat	104
high_sat	238
low_val	22
high_val	134

```
in find_regions, br is (1, 1, 477, 478)
in find_regions, br is (1, 1, 474, 478)
in find_regions, br is (1, 1, 475, 478)
in find_regions, br is (1, 1, 475, 478)
in find_regions, br is (1, 1, 476, 478)
in find_regions, br is (1, 1, 477, 478)
in find_regions, br is (1, 1, 478, 478)
in find_regions, br is (1, 1, 477, 478)
in find_regions, br is (1, 1, 478, 478)
in find_regions, br is (1, 1, 477, 478)
in find_regions, br is (1, 1, 476, 478)

if self.last_key_pressed == ord('b'):
    cv.ShowImage('threshold', self.blue)
if self.last_key_pressed == ord('R'):
    cv.ShowImage('threshold', self.red_threshed)
if self.last_key_pressed == ord('G'):
    cv.ShowImage('threshold', self.green_threshed)
if self.last_key_pressed == ord('B'):
    cv.ShowImage('threshold', self.blue_threshed)

if self.last_key_pressed == ord('h'):
    cv.ShowImage('threshold', self.hue)
```

# Week 2

challenging (!) warm-up activity

Identify the six image components: R, G, B, H, S, and V

... to identify RGB and HSV components

# Week 2

Color segmentation

Kinect: RGB

keyboard/mouse events

*Creativity?* Recursion!

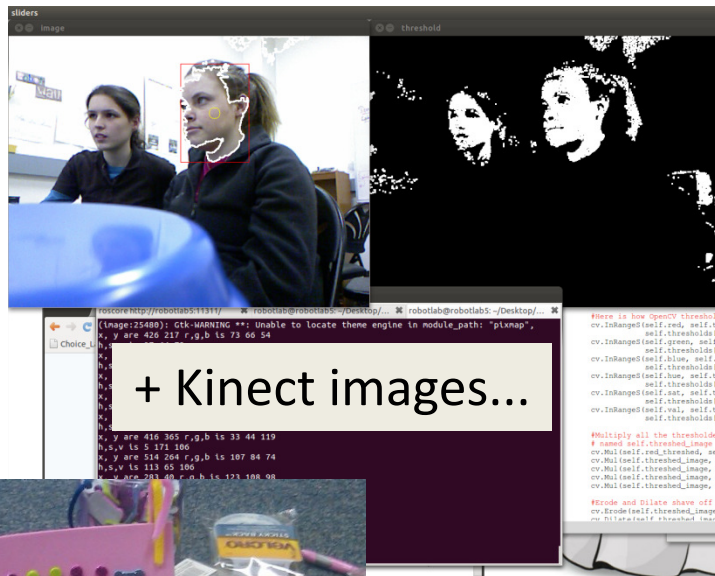

# Week 3

Finite-state control

Kinect: RGB

finite-state machines

robot sensors...

+ your own custom  
state-machine thread

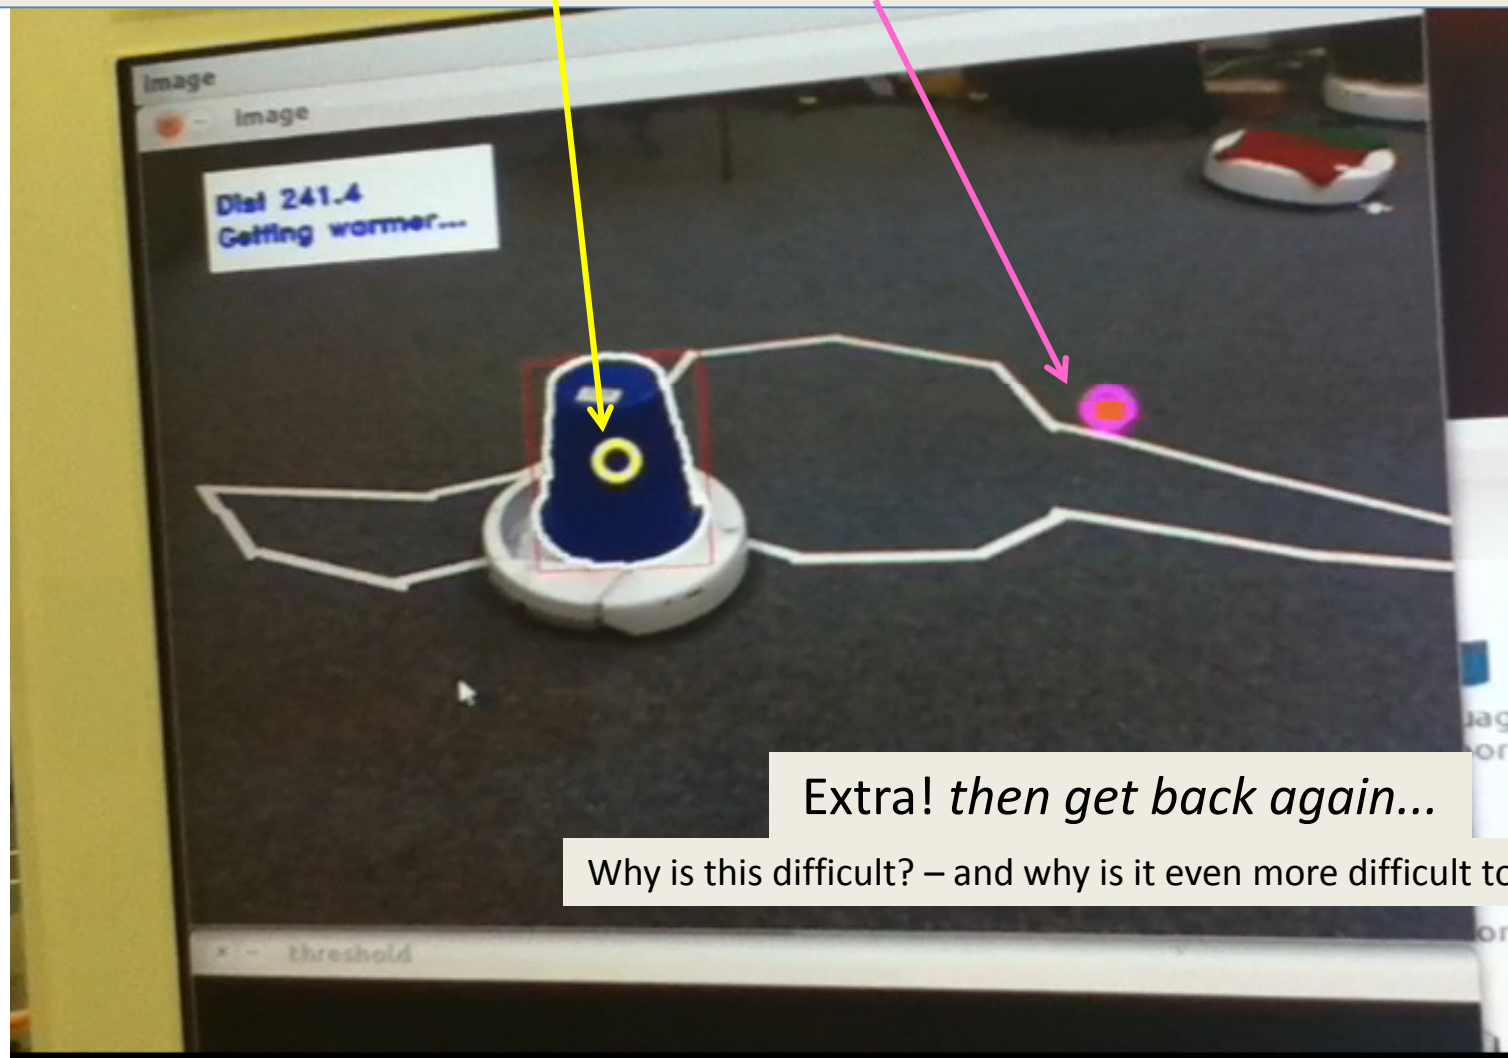

# Week 4

Finite-state control

Kinect: RGB

understanding vs.  
implementation

Task: to drive the robot to any point clicked in the Kinect's image

# Week 4

Finite-state control

Kinect: RGB

understanding vs.  
implementation

# Week 4

Finite-state control

Kinect: RGB

understanding vs.  
implementation

# Week 4

Finite-state control

Kinect: RGB

understanding vs.  
implementation

# Week 5

Wall-angle estimation

Kinect: Depth

understanding vs.  
implementation

Kinect's range images

# Week 5

Wall-angle estimation

Kinect: Depth

understanding vs.  
implementation

What if this pixel at (42,240) reads 1 meter "deep"?  
What are that point's coordinates *in meters*?

# Week 5

Wall-angle estimation

Kinect: Depth

understanding vs.  
implementation

Top-down look at one slice  
of the Kinect's view (row=240)

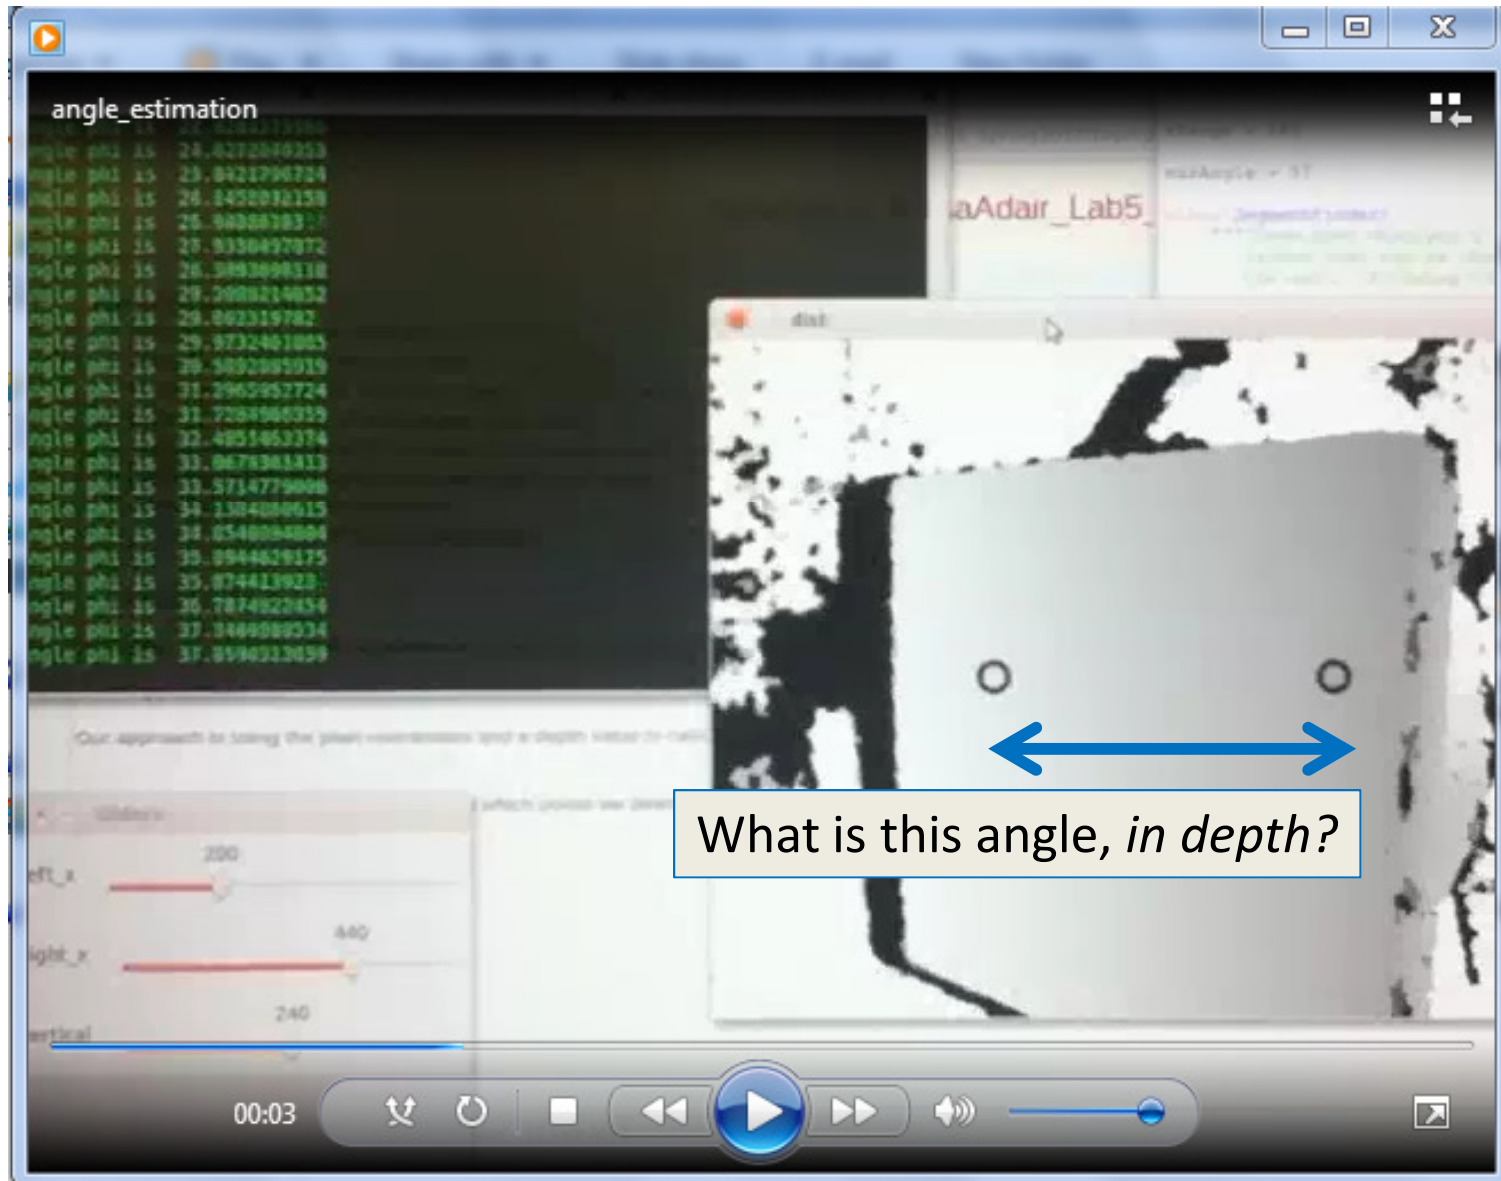

# Week 5

Wall-angle estimation

Kinect: Depth

understanding vs.  
implementation

# Feedback on labs 3-5...

understanding vs.  
implementation

*"Our biggest challenge was figuring out the math behind aligning the robot with the target point."*

- Sarah and Steve

*"We ran into a lot of problems in doing the actual math which should direct the roomba."*

- Alexa, Edward, and Spencer

*"We focused most of our attention on getting the math correct."*

- Eric and Benson

*"Math is amazingly hard.."*

- Jessi and Haak

# Feedback on labs 3-5...

understanding vs.  
implementation

# Week 6

Robot follower

Kinect: Depth

proportional control

**Challenge:** lead your robot out the door, into another room, and back

things can always be worse...?

Weeks 6-7

lots of *floor* time

Weeks 6-7

lots of *floor* time

even when it *does* work

# Week 6

Robot follower

Kinect: Depth

proportional control

success... (at 2x)

# Week 7

Wall follower

Kinect: Depth

integration and  
debugging

# Week 7

Wall follower

Kinect: Depth

integration and  
debugging

down the halls...

# Week 9

Gesture control

quadcopters

GUI/visualization

"Supermanning" the drone – *from the drone's point of view.*

# Week 10

Autonomous flight

quadcopters

defensive  
programming

Escape!

# Weeks 11-14

open-ended projects

self-defined problems

cat-and-mouse robots (4x)

Summer!

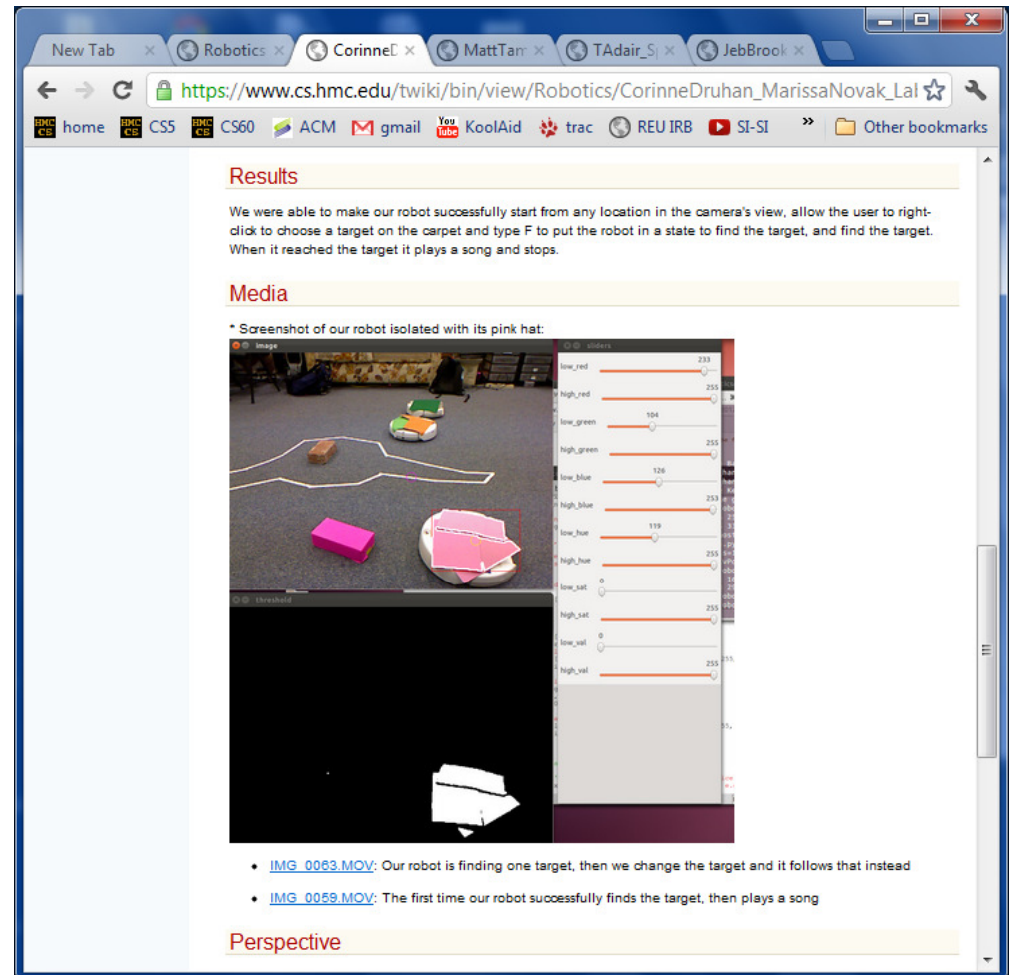

Summer!

# *In conclusion...*

Computational confidence-  
building right after CS1  
command-line  
flaky hardware  
making state explicit  
difficult debugging  
compelling applications!

Self-directed portfolio of  
results (and failures)

Getting beyond **DWIC**...

10-20 page write-up with screenshots,  
videos, descriptions, and reflection

# Week 2

challenging (!) warm-up activity

... to identify RGB and HSV components
